**The Possibilities of Development of Agro-Ecological Tourism
in Vojvodina**

MSc Robert Čordaš, engineer of technology

Abstract:

The members of The European Union (EU) are abiding to the quotes of agricultural production, which are centrally determined for all EU members. Those are principles of the new way of an approach to agricultural economy. All this points us out the need for changes in the way of agricultural production in our country.

One should find another content of using of agricultural surface. One should use the benefits which tourism provides, with the respect and preservation of the specifics of some regions for these kinds of development of regions in the country, and as we as in Vojvodina.

Another approach to life and agricultural economy should be determined due to a development of agro - ecological tourism, regardless to the predefined protected natural areas. This represents a mutual act of economic and social science in the region, which are agriculture, economy, ecology, ethnology, tourism and history. The beginnings of this new approach of utilization of surfaces are present in the territory of the Town of Subotica.

A mutual presentation of protected areas, education about a new way of living on protected goods was organized, with a glance to the introduction of the local population of the above mentioned areas into the activities.

Key words: agricultural production, countryside tourism, ecotourism, agro - ecotourism.

PhD thesis is kept in the library of Faculty of Biofarming in Bačka Topola, Megatrend University - Belgrade (pages:152, pictures11, original written in Serbian with abstract in Serbian and English).
